WASH

Waste water treatment

What data will this generate?

- Location and time of complaints
- Average time from complaint to wastewater collection, by location
- Actual trucking routes
- Potential to include volume of waste?

Using the data: Can we . . . ?

- Advise on optimal wastewater truck routes or “rest” locations
- Predict when tanks should be emptied, and include these into truck schedules to improve number of service requests
- Anticipate needs, behaviours or trends in relation to weather or other episodic events
- Identify anomalous usage of waste facilities, potentially pointing to change in the refugee population, or changes in how facilities are being used
